

prd-850

This a highly productive professional product that can be calibrated to 4 levels depending on demand by chopping in a single operation in cubic form without disturbing the characteristics of the nuts, pistachios, peanuts, walnuts.

The dust ratios formed after cutting can be classified according to the condition of the product to be processed; 17% in nuts and 7-10% in others. All parts of our machine contacted by the product are made of stainless steel. The hourly capacity is approximately 500 Kg.

HOT SHOCKING
MACHINE

BDB 1160

It is a highly efficient professional product designed and manufactured to remove the skin from the calibrated and shocked almond and apricot kernels of all sizes.

Its capacity is approximately 80 kg per hour.

ram 1000

The professional product of ours which is designed and produced for dehumidification after processing of products such as hazelnut, pistachio, peanut and almond (membrane shell extracting and slitting process). According to preference, they are produced in two types; (RAM 1000) (RAM 500).

Our products are made of stainless material in conforming to AISI 304 Quality Food Standards. (RAM 1000)
